MOLE SCRAM

READY TO USE ORGANIC REPELLENT

Tunneling moles can destroy your beautiful lawn and kill or injure your garden plants and flowers. Moles can dig up to 18 feet in an hour! They are rarely seen, have no natural predators and are hard and expensive to trap. Most mole repellents use only one proven ingredient - Castor Oil - in a low concentration which takes time to affect mole behavior.

MOLE SCRAM™ has been proven to quickly and effectively reduce & eliminate mole activity! Our all natural organic repellent contains more active ingredients than most other brands. Mole Scram also contain two other highly effective natural active ingredients for more repelling power... and helping make it fast acting too!

HOW DOES IT WORK? Mole Scram™, a proprietary blend of natural and organic ingredients gives you **triple action protection**:

BAD TASTE (from natural distasteful oils)

LESS FOOD (reduces insect activity)

STRONG SMELL (but mild to us)

Watering or rainfall is a key requirement to activate Mole Scram. Water draws the active oils from the granules into the soil. This action rapidly begins the repelling process. Mole Scram works faster because our biodegradable carrier releases the active ingredients more quickly than other repellents.

Mole Scram repels moles and alters their environment in **three ways**: **1.** The castor oil coats worms, grubs and bugs, making food both unpleasant to taste and uncomfortable to digest. **2.** All active ingredients make mole tunnels and surrounding soil bad-smelling. **3.** Lastly, the garlic oil and citronella in Mole Scram reduce insect activity - food availability - in treated areas. Mole Scram's high concentration of fast acting ingredients also goes farther - up to **50% more coverage** than other repellents. Remember, although Mole Scram Repellent is fast acting, it may take up to 1 week for the mole to associate their discomfort and hunger with the Mole Scram treated area.

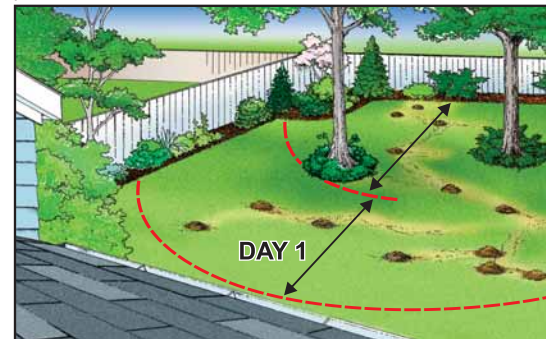

MOLE SCRAM IS AN EXCELLENT PREVENTATIVE MEASURE! Spring & Fall applications of our product will prevent mole activity in your yard. Mole Scram is fully backed by EPIC's industry-best **100% GUARANTEE!**

Mole activity can damage lawns, kill plants, and even weaken above-ground structures, causing expensive damage throughout your yard.

FAST & EASY TO APPLY!

APPLICATION INSTRUCTIONS: Using shaker container or rotary spreader, cover entire area where moles are present. Apply Mole Scram **DAY 1** to 50% of lawn starting at area furthest from where you want moles to exit, water for 20 mins.

Day 2 apply Mole Scram to remaining 50% of affected lawn. Water Day 1 and Day 2 for 20 mins. Locate mole runways, punch 1" holes every 10 ft. and drop granules into holes, then cover with soil. Also apply to the ends of each runway. Apply 1 lb. per 750 sq. ft. **NOTE: Watering (or rainfall) is the key to activation as it draws the oil from the granules into the soil. This action rapidly begins the repelling process.** The mole's food becomes coated which disrupts the mole's digestive system. The Mole Scram formula is designed to also repel insects, denying them yet another source of food. The mole will eventually retreat to another location to forage and eat without discomfort. Finally Mole Scram's odor is offensive to moles. **Please be patient. While Mole Scram is fast acting, it may take up to 1 week for the mole to associate their discomfort and hunger with the Mole Scram treated area. USE AS A PREVENTATIVE MEASURE** Mole Scram should be applied at the beginning of Spring and then Fall, the two highest mole activity seasons.
